5 Simulation Observations 7

6 Research & Extend 8

7 Reflection Questions 9

8 STEM Challenge 10

1 Pre-Assessment

ModelIt!

What Do You Know? Answer each question below to the best of your ability. There are no wrong answers — this helps your teacher understand what you already know!

1 Circle what causes a flood: (picture of lots of rain / picture of a sunny day)

2 Draw a wall that stops water from reaching a house.

2 Scoring Rubric

ModelIt!

Your teacher will use this rubric to assess your work. Read through each level to understand what is expected!

Skill	Expert (4)	Proficient (3)	Developing (2)	Beginning (1)
Identifying Components	EXPERT Correctly identifies and sorts ALL components as internal or external with detailed reasoning	PROFICIENT Correctly identifies and sorts MOST components with some reasoning	DEVELOPING Identifies components but has difficulty sorting or explaining	BEGINNING Needs significant help identifying components
Establishing Relationships	EXPERT Accurately describes ALL positive and negative relationships with clear evidence	PROFICIENT Accurately describes MOST relationships with some evidence	DEVELOPING Identifies some relationships but struggles with direction	BEGINNING Needs help understanding how components connect
Running Simulations	EXPERT Makes accurate predictions AND explains surprising results using evidence	PROFICIENT Makes reasonable predictions and records clear observations	DEVELOPING Runs simulations but predictions or observations are incomplete	BEGINNING Needs help running simulations or recording data
Explaining Results	EXPERT Uses multiple pieces of evidence to explain HOW and WHY systems interact	PROFICIENT Uses evidence to explain system interactions	DEVELOPING Gives partial explanations with limited evidence	BEGINNING Needs help connecting evidence to explanations

3 Component Analysis

ModelIt!

What is a Component?

A **component** is a part of a system that plays a specific role. Components can be **EXTERNAL** (come from outside the system) or **INTERNAL** (happen within the system).

Sort These Components

Amount of Rain

Flood Level

EXTERNAL	INTERNAL

Explain your reasoning: Why did you sort each component the way you did?

4 Model Recording Page

ModelIt!

Draw your model showing all components and their relationships. Use the relationship key below to label your arrows!

+ **POSITIVE:** When A increases, B also increases

− **NEGATIVE:** When A increases, B decreases

Draw your model here

? Explain ONE relationship in your model. What happens when one component changes?

5 Simulation Observations

ModelIt!

Run each scenario in ModelIt! First, write your **prediction**. Then run the simulation and record what you **observe**.

1 Scenario 1: Light Rain

Amount of Rain set to low

MY PREDICTION

WHAT I OBSERVED

2 Scenario 2: Heavy Rain

Amount of Rain set to high

MY PREDICTION

WHAT I OBSERVED

6 Research & Extend

ModelIt!

Real systems are more complex than our model! Here are additional components scientists study. Choose one and explain how it could connect to our model.

Possible New Components

My Extension

A Which new component would you add to the model?

B How would it connect to the existing components? (Draw or describe)

C What evidence or reasoning supports your connection?

7 Reflection Questions

ModelIt!

The Big Question

What can people do to stop water from flooding their homes? Use evidence from your simulation to support your answers.

8 STEM Challenge: Build a Flood Barrier

ModelIt!

YOUR ENGINEERING MISSION

Design and build a barrier out of classroom materials that stops water from reaching a toy house on the sand table.

THE SCENARIO

Oh no! A big rainstorm is coming to Toy Town and the houses might flood! Your engineering team must build the best barrier to stop the water from reaching the houses. You have clay, craft sticks, aluminum foil, and plastic wrap. Which materials will keep the water out?

Engineering Design Thinking

1. WHAT MATERIAL WILL YOU USE TO BUILD YOUR WALL?

2. HOW TALL DOES YOUR BARRIER NEED TO BE?

3. HOW WILL YOU TEST IF YOUR BARRIER KEEPS THE WATER OUT?

My Design

DESIGN AREA — DRAW YOUR SOLUTION

N

Explain your design using scientific evidence from the simulation:

Real Career Connection

Civil Engineers design bridges, roads, dams, and flood walls to keep people safe from water and weather. They earn $60,000-$115,000/year.
